**For any additional information or concerns
please contact us or ask your service
technician.**

**If you or someone you know is sensitive to
chemical odors please contact us.**

Please be sure to prep your home! We can
only guarantee your home will be bug free if
you follow all of our instructions.

Before Treatment

Vacuum or shampoo all carpet and rugs inside of home. Including under the furniture and beds. **Be sure to empty vacuum bag OUTSIDE of home.**

Be sure to tell your technician where your pet(s) visits most often. This is where the highest concentration of fleas will be.

Your pet will need to be treated! Get them treated by a veterinarian or animal hospital. Using any products you trust from the store will work as well. It is very important to get your pet treated around service time!

Wash **all** pet bedding, blankets, and fabric material. Warm soapy water is ideal. Remove all pet food & water containers. Wash or discard any pet toys. **Try** to consolidate all furniture to the center of the room. The more floor space we can treat, the more effective our service will be. (Do this step if capable)

After Treatment

DO NOT re-enter home until 2-3 hours after the service. Once inside the home, open all windows to help ventilate any left over chemical smell. If the smell is too strong after the 2-3 hours have passed, give it up to 4 hours. **Continue to vacuum/shampoo home for 14 days after service!** This is a huge step and should not be skipped. Our treatment will control and kill fleas, but vacuuming eggs and *pupae* is key to maintaining control over fleas.

It may take up to 21 days before all fleas are gone. This is due to the flea's life cycles.
