*Pestmaster Services has an arsenal of weed control equipment that may be employed to tackle difficult weed control operations across the western states. All equipment is equipped with spark arrestors and meets the requirements established by the USDA Forest Service.*

*Our commitment to a project is from the start of the project until the job is completed correctly.*

### Vegetation Management Experience

Pestmaster Services has provided vegetation management, right of way, fire fuel reduction, and noxious weed abatement for over 39 years. Our experience is nation-wide, with work completed from Florida to Hawaii. Our prior clients include the Federal Government, Department of Defense, State and Local Governments, as well as Conservation Districts and Environmental Agencies.

Pestmaster has developed and maintained these relationships through numerous contracts. We have developed, mapped and executed thousands of acres of work, mechanically and chemically while maintaining all sensitive environments and habitats around work sites.

Pestmaster Services utilizes the most cost-effective roadside weed management trucks. They are equipped with on-board computer systems that adjust spray width, volume and speed to the trucks speeds delivering precise herbicide applications consistently. We also have extensive experience with our hydro-ax.

### Pestmaster's Unique Services

- Noxious/ Non Native Invasive Weed Control
- Right-of-Way (Railroad and Road Shoulders)
- Maintain Fire Breaks & Flood Control Channels
- Aquatic Weeds and Algae
- Utility/ Bare-Ground

**We pride ourselves in meeting and exceeding your expectations.**

**Invasive Weed Control**

Pestmaster Services is dedicated to making a contribution to the betterment of our natural habitat through the control of Noxious Weeds and harmful Tree Insects/Diseases. All applications are done with strict attention to safety, and other environmental factors (such as anticipated rain, run-off, cold weather that would impede performance of a systemic herbicide, etc.)

We are well aware of the importance of “treading lightly” in the areas where native vegetation is actively growing and that needs to be preserved and protected. Our trained and dedicated staff will ensure the safety of the native plant community by mapping efficient access points into areas where the work is to be done.

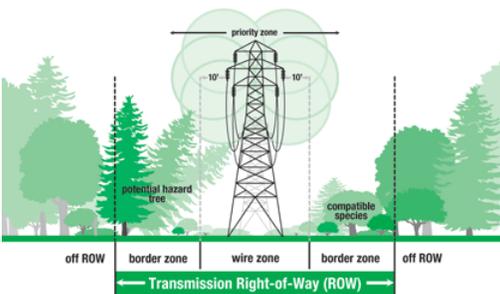

**Aquatic Weed Control**

All waterways – ponds, lakes, canals – are susceptible to bad nutrients that accelerate the growth of algae, weeds and other undesirable vegetation. These bad nutrients enter the water via street drainage, lawn debris and runoff from fertilized yards. Additionally, weeds can get into your waterway from seeds carried by the wind, birds, boat trailers, etc.

We provide an ample amount of water management services for private and public bodies of water: herbicide treatment, aquatic vegetation management plans, sediment removal, fountains and aerations, lake and pond depth contour mapping, aquatic vegetation surveys, and mechanical harvesting.

**Right of Way Weed Control**

Pestmaster Services has compiled an impressive resume of work completed in the field of high voltage transmission and distribution line right-of-ways.

Our experience is literally nation-wide, with work completed from Florida to Hawaii. Pestmaster Services brings considerable experience, resources, and commitment to the safety requirements we have enforced around these high voltage environments.

Pestmaster Services has held contracts with Pacific Gas and Electric, Los Angeles Department of Water and Power, NV Energy and Department of Energy, WAPA.

**Attention:** Federal Agencies Dealing with Weed Management Issues, you can order your services right off our GSA Schedule without posting RFQ/RFP's and meet all requirements of the FAR.

**Celebrating Over 39 Years of Service**

Service centers across Arizona, California, D.C., Florida, Georgia, Kansas, Maryland, Nevada, New Jersey, New York, Pennsylvania, South Carolina, Texas, Utah, Virginia and Lebanon
