

## **Roofing Permit**

You will need to obtain a building permit and provide the number of square feet of roofing to be installed. You will also need to annotate the type of roof covering, what type of material is beneath the roofing, and the number of layers of shingles presently on the roof. We would also need to know if the layers are being removed, if felt paper is being used, if ice & water is being used, if there are louver or gable vents, ridge vent, and the number of nails per shingle. Recent code adoption also required taping of seams for new and replacement roofs which are stripped. The tape must be a nominal 4" in width and meet the requirements of the State Building Code. Unless the homeowner is doing the work it is also necessary to provide licensing and insurance information for the contractor on the permit application.
