# Using a Flood Insurance Rate Map (FIRM)

#### **HOME BUILDER'S GUIDE TO COASTAL CONSTRUCTION**

Technical Fact Sheet No. 3

**Purpose:** To explain the purpose of FIRMs, highlight features that are important to coastal builders, and explain how to obtain FIRMs.

#### What Is a FIRM?

- Flood hazards have been mapped by FEMA for approximately 20,000 communities in the United States, most commonly on *FIRMs*. A FIRM is a product of the Flood Insurance Study (FIS) for a community and is available in paper form and digital form.
- FIRMs delineate Special Flood Hazard Areas (SFHAs)

   land areas subject to inundation by a flood that has a 1-percent probability of being equaled or exceeded in any given year (hence, the terms "1-percent annual chance flood" and "100-year flood"). SFHAs are shaded on the FIRM and are divided into different flood hazard zones, depending on the nature and severity of the flood hazard.

## Why Are FIRMs Important?

- FIRMs show the limits of mapped flood hazard areas in a community.
- The insurance zone designations shown on FIRMs are used in the determination of flood insurance rates and premiums.
- The 100-year flood elevations and flood depths shown on FIRMs are the minimum regulatory elevations on which community floodplain management ordinances are based.
- The information shown on FIRMs can affect the design and construction of new buildings, the improvement and repair of existing buildings, and additions to existing buildings (see Fact Sheet Nos. 2 and 29).

# What Are Flood Hazard Zones and Base Flood Elevations, and How Do They Affect Coastal Buildings?

 Base Flood Elevations (BFEs) are typically shown on FIRMs for flood hazard zones A and V. The BFE is the expected elevation of flood waters and wave effects during the 100-year flood (also known as the "Base Flood"). The BFE is referenced to the vertical datum shown on the FIRM.

## **FIRMs Are Used By:**

- Communities, to regulate new construction\*
   (e.g., foundation type, lowest floor elevation, use of enclosed areas below the lowest floor)
- Designers and builders, to ascertain flood hazards and plan new construction\*
- Lenders, to determine whether flood insurance is required
- Insurance agents, to establish flood insurance premiums
- Land surveyors and engineers, to complete National Flood Insurance Program (NFIP) elevation certificates (see Fact Sheet No. 4)

#### Flood Hazard Zones In Coastal Areas

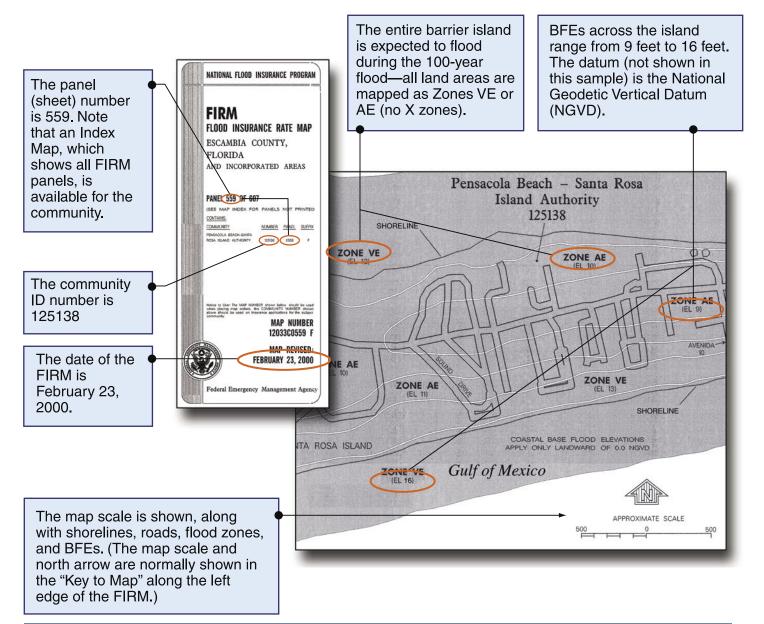

(see the sample FIRM on the next page)

- V zones are those areas closest to the shoreline and subject to wave action, high-velocity flow, and erosion during the 100-year flood.
- A zones are areas subject to flooding during the 100-year flood, but where flood conditions are less severe than those in V zones.
- AO zones are areas subject to shallow flooding or sheet flow during the 100-year flood. If they appear on a coastal FIRM, they will most likely occur on the landward slopes of coastal dunes. Flood depths, rather than BFEs, are shown for AO zones.
- X zones are areas that are not expected to flood during the 100-year flood.
- Newer FIRMs label zones as "VE" (V zone with BFE determined) and "AE" (A zone with BFE determined).
- Older FIRMs label zones with a letter and number (e.g., A1, A10, V10). Ignore the number and look at the letter.
- Older FIRMs label X zones as zone "B" or zone "C." Treat the old and new zone designations the same.

- The BFE and flood hazard zone will affect the lowest floor elevation and foundation type for new construction\* (see Fact Sheet Nos. 4 and 11).
- Some communities have adopted higher standards for coastal construction (e.g., lowest floor elevations above the BFE, restrictions on foundation types and enclosures in A zones). Builders should consult their local jurisdiction for details.
- Most communities have adopted the latest FIRM and FIS (and, therefore, the flood hazard zone and BFE designations) as part of their efforts to regulate new construction\* in coastal floodplains. These communities will have adopted a floodplain management ordinance, which spells out the detailed requirements.
  - \* Note that "new construction" will include some additions, improvements, repairs, and reconstruction consult the community about "substantial improvement" and "substantial damage" requirements.

### **Sample FIRM**

This map is a portion of the FIRM for the barrier island community, Pensacola Beach, Florida. As shown below, several things are apparent from the map.

#### Where Can I Get FIRMs and Other Information?

The FIRM for a community, and the local floodplain management regulations, should be on file and available for viewing at the office of the community floodplain administrator.

**FEMA's Map Service Center** can be accessed at <a href="http://store.msc.fema.gov">http://store.msc.fema.gov</a>. Index sheets and individual FIRM panels can be viewed on line through the MSC web site, and "FIRMettes" (user-selected portions of flood maps such as the sample above) can be created, saved, and printed.

# Is There Anything Else I Should Know About Coastal Flood Hazard Zones and Flood Elevations?

- Many FIRMs are more than a few years old and may no longer accurately represent coastal flood hazards. Sections 7.8 and 7.9 of FEMA's revised Coastal Construction Manual (FEMA-55, 2000) describe how coastal flood hazards are mapped and how to determine whether coastal FIRMs reflect present day flood hazards.
- FIRMs do not incorporate the effects of long-term shoreline erosion. This information should be obtained from other sources (see Fact Sheet No. 7).
- Recent post-storm investigations and studies have shown flood forces and damage in coastal A zones
  can be very similar to those in V zones. Although FIRMs (and minimum NFIP building standards) don't
  differentiate between A zones in coastal areas and riverine A zones, builders should consider adopting
  V zone foundation and elevation standards for new construction in many coastal A zones.
- Many communities and states require lowest floor elevations to be above the BFE. One term used to describe this higher elevation standard is **Design Flood Elevation** (**DFE**).

Copies of FIRMs, FISs, and related products can also be obtained from FEMA for a nominal fee.
