Construction improvements to the City’s sewer system including sewer pipes, sewer manholes and sewer pump stations are currently ongoing and are being financed by the Massachusetts Clean Water State Revolving Fund (CWSRF).

The CWSRF program is administered by the Massachusetts Department of Environmental Protection (MassDEP) with joint funding from the U.S. Environmental Protection Agency (US EPA) and the Commonwealth of Massachusetts. This project consists of installation of a new lining system in the existing sewer pipes, manholes and sewer service connections, upgrades to various pump stations, as well as improvements to drainage systems and redirection of sump pump discharge from the sewer to the drainage system.

Projects currently ongoing and/or scheduled in 2019/2020 include the following:
- Phase XI Sewer Rehabilitation
- Phase X Sewer Rehabilitation
- Sump Pump Removal – Contracts 3C, 3D & 6A
- Beachmont–Sales Creek Utility Improvements

This work will provide necessary upgrades/improvements that are intended to minimize the risk of Sanitary Sewer Overflow (SSO) events, reduce infiltration and associated treatment costs.

CWSRF programs operate around the country to provide states and communities the resources necessary to maintain and improve the infrastructure that protects our valuable water resources nationwide.

Construction improvements to the City’s water main system are currently scheduled and are being financed by the Massachusetts Drinking Water State Revolving Fund (DWSRF).

The DWSRF program is administered by the Massachusetts Department of Environmental Protection (MassDEP) with joint funding from the U.S. Environmental Protection Agency (US EPA) and the Commonwealth of Massachusetts. This project consists of removal and replacement of existing Lead Service Lines (LSLs) located in the City’s streets. These lines run from the water main (in street) to the water meter located on private property.

An additional construction project consists of removing and replacing water mains to provide redundancy and improve water quality in the Oak Island neighborhood of the City.

This work will provide necessary upgrades/improvements that are intended to minimize the risk of elevated levels of lead in the drinking water.

DWSRF programs operate around the country to provide states and communities the resources necessary to maintain and improve water infrastructure nationwide.
