

HAPPY THANKSGIVING?

GIVE THE PLUMBER A DAY OFF: NEVER POUR FATS AND OILS DOWN THE DRAIN!

Why is the day after Thanksgiving the busiest day of the year for plumbers? Because turkey and other favorite foods generate a lot of grease...which is tempting to pour down the drain. But once grease cools, it can clog your pipes.

Always pour fats and oils into a can, and wipe off greasy plates and pots with paper towels. Then put them all in the garbage.

SEE OTHER SIDE FOR MORE TIPS ABOUT TREATING YOUR PIPES RIGHT THIS FALL.

TIME TO PROTECT FAUCETS + PIPES FROM FREEZING!

With cold weather coming, now's the time to make sure your pipes aren't vulnerable to freezing and bursting.

The first things to do:

- Close basement vents to protect indoor pipes.
- Turn off the supply to outdoor faucets and showers.
- Drain the pipes and shut off water to uninsulated seasonal buildings.

Here's a complete guide to keeping pipes from freezing, inside and outside your house:
