

1. Quantify > 8,500 neuro based proteins in serum or plasma
2. Sequence all phospho-tau sites in CSF and plasma
3. Glycosylated Clusterin - a blood based biomarker assay to stratify normal, MCI and AD populations.
4. Bespoke mass spectrometric based SRM assay development
 - Assays for Abeta 40/42
 - Truncated tau species (e.g. C3-Tau)
 - What other assays do you need where no ELISA exists?

Pharmacodynamic phosphorylation sites of tau
