Substantial contract win for Proteome Sciences

London, 12 May, 2022. Proteome Sciences is pleased to announce that the Company has secured a contract from a major US academic group to evaluate changes on the proteome and phospho-proteome of tissue and blood samples taken from persons with and without a neurodegenerative disease. The contract value is in excess of £0.5m and we expect the study to be completed this year.

Commenting on the contract, Richard Dennis, Chief Commercial Officer of Proteome Sciences said:

"We are pleased that the SysQuant workflows that we offer has been selected by our client to quantitate the proteomic/phosphoproteomic changes in these research samples. By using the TMTpro™ reagents we are able to analyse 17 samples and one reference in one mass spectrometry experiment, so are able to deliver data from this large sample set in a timely manner and still be able to better quantitate smaller proteomic differences."

About Proteome Sciences plc. (www.proteomics.com)

Proteome Sciences plc is a specialist provider of contract proteomics services to enable drug discovery, development and biomarker identification, and employs proprietary workflows for the optimum analysis of tissues, cells and body fluids. SysQuant® and TMT®MS2 are unbiased methods for identifying and contextualising new targets and defining mechanisms of biological activity, while analysis using Super-Depletion and TMTcalibrator™ provides access to over 8,500 circulating plasma proteins for the discovery of disease-related biomarkers. Targeted assay development using mass spectrometry delivers high sensitivity, interference-free biomarker analyses in situations where standard ELISA assays are not available.

The Company has its headquarters in London, UK, with laboratory facilities in Frankfurt, Germany.
