

Pre Canine Inspection Information

- Turn off any central heating or space heaters at least 30 minutes prior to inspection.
- All pets, and their food, water & treats must be removed from inspection areas at least 20 minutes prior to inspection. Pet bedding may be left.
- Clear areas of clutter so that dog and handler teams can thoroughly search. We can't search what we can't access.
- Be sure all food and trash is removed from inspection areas!
- Remove all pest control products (glue/sticky traps, rodent traps)
- Make sure any medication or any items that may harm animals are picked up and out of the inspection areas.
- Please limit the number of people in the home during inspections. We may ask that people wait outside the inspection area so that the dogs are not distracted.

We cannot inspect areas which:

- Have excess debris/trash on the floor, **especially any powder like substances**. No Diatomaceous Earth, Boric Acid, Carpet Freshener Powder or Baking Soda should be left in inspection areas.
- Have clutter and materials that impede the canine's ability to search thoroughly.
- Areas that are deemed dangerous for the dog or handler (carpet tacks, needles, unstable furniture, etc.)
